

Software Verification

Static Analysis Project

Karra Giovanni - 2169942

15 January 2026

Tools & Features

The software has been developped in pure **Rust**, using the [iced.rs](#) crate for the **GUI** part

It includes :

- DIY **syntax parsing** with helpful error messages
- **Modular generic architecture** allowing for easy implementations of more **abstract domains**
- Both a **graphical** and **command line** interface
- **Int_{m,n}** domain (and CLI only **Sign** domain)
- Configurable **widening** and **narrowing**

The **codebase** is available [here](#)
